Subject Index to Volume 10

A

Acid, secretion, new twists (Trendsetters), 245
Acid-base balance, dietary changes, renal proximal tubule response, 77
Adenosine, receptors, central nervous system, 122
Adenosine monophosphate, cyclic
  chloride channels activated by, gallbladder, 86
  stimulation of intestinal glucose-sodium cotransport, 288
β_2-Adrenergic receptors, polymorphisms, functional properties, 265
Airway, axon reflexes, 91
Amyl nitrate, angina pectoris, Brunton's use of (Historical Perspectives), 141
Angina pectoris, Brunton's use of amyl nitrate in, 141
Annexins, calcium-dependent regulators of membrane function, 171
Anoxia, energy balancing during (Trendsetters), 145
ANP. *see* Atrial natriuretic peptide
Antibodies, sympathetic nervous system, 101
Aquaporins, renal and nonrenal tissues, 12
Arterial lumen, control, shear stress on endothelium, 204
Atrial natriuretic peptide, help for congestive heart failure, 247
Autoregulation, role of lymph pump, 112
Axon, reflexes, airway, 91

B

Bacterial-epithelial cell interactions, barrier function, 160
Basement membrane, mechanical properties of, 30
Bilirubin, transport and metabolism, hepatocellular, 35
Blinking, brain stem reflex, 147
Blood flow, muscle, during systemic hypoxia, 274
Blood pressure, genes and, 190
Brain
  adenosine receptors in, 122
  endocrine messengers in, corticosteroids, 71
  function, neurotransmitter release, synaptic vesicle role in, 42
Brain stem, reflex, eyelid blink, 147
Breathing. *see* Respiration

C

Calcium, regulation of membrane function, annexins, 171
Calcium ions
  receptor-dependent regulation, cellular functions, 1
  regulatory protein complex, modulation of, cardiac muscle, 6
Capillaries, basement membrane, mechanical properties of, 30
Cardiorespiratory control, central, endothelin role in, 228
Carotid body, oxygen-sensing cells, 211
Cellular defense, perforin mediation of, 51
Cellular functions
  calcium ions, receptor-dependent regulation of, 1
  regulation, cell volume in, 18
Cell volume, regulation of cellular function, 18
Central nervous system
  adenosine receptors in, 122
  cardiorespiratory control, endothelin role in, 228
Chemoreceptor, respiratory, 49
Chloride channels, cAMP-activated, gallbladder, 86
Cochlear neurotransmission, recent advances, 178
Congestive heart failure, ANP effects, 247
Coronary arteries, flow (Trendsetters), 191
Corticosteroid hormones, brain, 71
Cystic fibrosis, cAMP, stimulation of intestinal glucose-sodium cotransport (Trendsetters), 288

D

Dietary acid, changes, renal proximal tubule response, 77
1α-Dihydroxyvitamin D_3, nongenomic actions of, control, 198

E

Editorial, role of IUPS, 53
Eicosanoids, regulation, epithelial function and growth, 153
Emphysema, tissue, spontaneous resolution of, 176
Endocrine messengers, brain, corticosteroids, 71
Endothelin, cardiorespiratory control and, central, 228
Endothelium, shear stress, control of arterial lumen by, 204
Energy, balance, during anoxia, 145
Enteric pathogens, epithelial function and, 160
Epithelium
  fluid absorption, cAMP as a regulator of, 86
  function, enteric pathogens and, 160
  function and growth, eicosanoids as regulators of, 153
  sodium channels in, related channels, 61
Exercise, graded ischemia and, skeletal muscle, 193
Eyelid, blinking, brain stem reflex, 147

F

Fick principle, oxygen leaks, heart, 129
Food and famine theory, revisiting, 81

G

Gallbladder, cAMP-activated chloride channels in, 86
Gastric mucosa, function, during hibernation, 55
Genetics, blood pressure and (Trendsetters), 190
Glucose
  transport, homeostasis and, transgenic mice, 22
  transporter family, facilitative, 67
GLUT, mammalian facilitative glucose transporter family, 67
Glycoproteins, channel-forming membrane, renal and nonrenal tissues, 12
Glycosylphosphoinositol, linkage to membrane proteins, 97
Growth, epithelial, eicosanoids as regulators of, 153
Growth hormones, food and famine theory, 81

H

Heart
  congestive failure, ANP effects, 247
  surface oxygen leak, 129
Hibernation, intestine and, 55
Historical Perspectives
  Brunton's use of amyl nitrate in angina pectoris, 141
  origin of the metric system, 46
  sodium-potassium pump and sodium-potassium-ATPase, 184
Homeostasis, glucose, transport and, transgenic mice, 22
Hyperalgesia
  neural mechanisms of, 260
  pain and, peripheral and central sensitization in, 216
Hypercalcemia, 1α-dihydroxyvitamin D_3 and, 198
Hyperglycemia, diabetic, control, muscle glucose transport and, 22
Hypertension, genetic and environmental factors, 190
Hypoxia
  oxygen-sensing cells in the carotid body, 211
  systemic, skeletal muscle vasculature and, 274

I

Inferior olive, two opposing theories (Trendsetters), 246
Insulin, food and famine theory, 81
Insulin-like growth factor I, food and famine theory, 81
International Congress of Physiological Sciences, 1997, 244
Intestine, hibernation effects, 55
Introns, essential for life? (Trendsetters), 98

0886-1714/95 $3.00 © 1995 Int. Union Physiol. Sci./Am. Physiol. Soc.

Ischemia, graded, exercising skeletal muscle, 193

J

Jaundice, diagnosis and treatment, bilirubin transport and metabolism in, 35

K

Kidney
  channel-forming membrane glycoproteins in, 12
  phosphate transporter, 287
Kidney tubules
  basement membrane, mechanical properties of, 30
  proximal, response to acid, 77

L

Liver, function, bilirubin transport and metabolism, 35
Lymphatic vessels
  fluid clearance, lung, 107
  series and parallel pumps, autoregulation and, 112

M

Membrane function, calcium-dependent regulators of, 171
Metric system, origin of (Historical Perspectives), 46
Microcirculation, vasomotion, consequences of (Trendsetters), 189
Muscle
  eyelid, brain stem reflex, 147
  glucose disposal, homeostasis and, transgenic mice, 22
  heart, calcium ion regulatory protein complex, mechanical modulation of, 6
  skeletal
    exercise, graded ischemia in, 193
    vasculature, systemic hypoxia and, 274
Myocardial infarction, mural adhesion and aggregation of blood platelets and, 117

N

NADPH oxidase, generation of superoxide, 233
Neurodegeneration, corticosteroid levels and, 71
Neuromuscular system, movement and, the size principle, 280
Neurotransmitters
  cochlear, recent advances, 178
  release, synaptic vesicles in, 42
Nitric oxide,
  research, use of amyl nitrate in angina pectoris and, 141

O

Olivocochlear system, efferent, different components of, 178
Oxygen
  consumption, heart surface, 129
  sensing, carotid body, 211
Oxygen-sensing cells, carotid body, 211

P

Pain, hyperalgesia and, peripheral and central sensitization in, 216, 260
Pancreas, uniquely adapted physiology in (Trendsetters), 97
Perforin, cellular defense (Trendsetters), 51
pH, blood, changes, renal proximal tubule response, 77
Phagocyte enzyme, NADPH, generation of superoxide and, 233
Phosphate transporter, renal (Trendsetters), 287
Platelets, mural adhesion and aggregation of, molecular mechanism, 117
Pneumothorax,
  barometric pressure, spontaneous resolution of, 176
Polymodal C-nociceptors, pain and hyperalgesia, 216
Potassium channels, ATP-sensitive, delayed rectifier and (Trendsetters), 146
Pressure, intrapleural and intracranial, subatmospheric, stability of, 176
Pulmonary alveolar wall, basement membrane, mechanical properties of, 30
Pulmonary edema, fluid clearance pathways, 107

R

Receptors
  adenosine, central nervous system, 122
  β_2-adrenergic, polymorphisms, functional properties of, 265
  calcium ion, regulation of cellular functions dependent on, 1
  effectors and, pathways between, sodium-potassium pump activity and, 253
  J, tachypnea and, 238
Reflexes
  axon, airway, 91
  brain stem, eyelid blink, 147
  J, tachypnea and, J receptors, 238
Regulatory protein complex, cardiac myofilaments, calcium regulation and, 6
Renin-angiotensin system, ANP effects and, congestive heart failure, 247
Respiration
  breathing rhythm generations, rostral ventrolateral medulla, 133
  chemoreception (Trendsetters), 49
Rhythm, breathing, rostral ventrolateral medulla and, 133
Rostral ventrolateral medulla, breathing rhythm generation, 133

S

Sensitization, peripheral or central, neural mechanisms of hyperalgesia, 260
Signal pathways, taste receptor cells, 166
Size principle, still working after all these years, 280
Sodium channels, epithelial, related channels, 61
Sodium-potassium pump
  activity, pathways between receptors and effectors, 253
  sodium-potassium-ATPase and (Historical Perspectives), 184
Stress, shear, endothelium, control of arterial lumen by, 204
Stroke, mural adhesion and aggregation of blood platelets and, 117
Superoxide, phagocytic NADPH oxidase and, 233
Sympathetic nervous system, antibodies in, 101
Synaptic vesicles, mediation of neurotransmitters, brain function and, 42

T

Tachypnea, J receptors and, 238
Taste, receptor cells, transduction in, 166
Thrombosis, mural, molecular mechanisms of, 117
Transduction, taste receptor cells, 166

V

Venular endothelium, metabolic sensors (Trendsetters), 50
Venules, basement membrane, mechanical properties of, 30

W

Water, permeability, vasopressin-regulated, aquaporins and, 12
Water channels, renal and nonrenal tissues, 12

Trends in Cardiovascular Education

Explore cardiovascular function with DynaPulse™ - the most advanced blood pressure and cardiovascular monitoring system available.

A microcomputer-based lab for cardiovascular education, DynaPulse will help you construct an interactive environment for research and learning. Complete with curriculum, hardware and software, DynaPulse is a comprehensive learning tool!

Your students will gain hands-on experience in cardiovascular monitoring. They will measure blood pressure, inspect heartbeats, identify arrhythmias, analyze trends, and perform statistical analysis. They will investigate a wealth of data acquired in real time from their own bodies!

Interdisciplinary curriculum is appropriate for middle school through college levels. Teacher-ready labs allow your students to apply what they have learned.

Outfit your entire classroom for much less than you would expect. Please call for brochures, a curriculum outline, and pricing.
